Proline Prosonic Flow 93W

Ultrasonic flow measuring system

Volume flow measurement for standard applications
with drinking water, wastewater and process water

Applications

The sensors are perfectly suited for the non-contact measurement of pure or slightly contaminated liquids, regardless of the pressure or electrical conductivity.

- Suitable for pipe diameters up to DN 4000 (160")
- Can be used with all metal and plastic pipes lined or unlined and with composite pipes
- Ideal solution for applications with water, e.g. drinking water, industrial water, wastewater, saltwater, deionized water, cooling water and heating water
- Perfectly suitable for
 - retrofit measurement
 - flow monitoring
 - improving measuring points
- Interface for easy integration into all common distributed control systems:
 - HART
 - PROFIBUS DP/PA
 - FOUNDATION Fieldbus

Features and benefits

The Prosonic Flow ultrasonic clamp-on system allows accurate and cost-effective flow measurement from outside the pipe and without the need to interrupt the process. The flow measurement is bidirectional and causes no pressure loss.

- Easy, safe and menu-guided sensor mounting ensures precise measuring results
- Long-term system integrity thanks to robust sensor and industrial mounting kit design
- Automatic frequency scan for optimized installation and maximum measuring performance
- IP 68 for pipes under water
- Also available as insert version
- Can also be supplied as two-path system for short inlet runs
- Remote configuration using Endress+Hauser's FieldCare software

Function and system design

Measuring principle

The measuring system operates on the principle of transit time difference. In this measurement method, acoustic (ultrasonic) signals are transmitted between two sensors. The signals are sent in both directions, i.e. the sensor in question works as both a sound transmitter and a sound receiver.

As the propagation velocity of the waves is less when the waves travel against the direction of flow than along the direction of flow, a transit time difference occurs. This transit time difference is directly proportional to the flow velocity.

Principle of the transit time difference measurement method

$$Q = v \cdot A$$

a Sensor

b Sensor

Q Volume flow

v Flow velocity ($v \sim \Delta t$)

Δt Transit time difference ($\Delta t = t_a - t_b$)

A Pipe cross-sectional area

The measuring system calculates the volume flow of the fluid from the measured transit time difference and the pipe cross-sectional area. In addition to measuring the transit time difference, the system simultaneously measures the sound velocity of the fluid. This additional measured variable can be used to distinguish different fluids or as a measure of product quality.

The measuring device can be configured onsite to suit the specific application using Quick Setup menus.

Measuring system

The measuring system consists of one transmitter and two sensors.

The transmitter is used both to control the sensors and to prepare, process and evaluate the measuring signals, and to convert the signals to a desired output variable.

The transmitter is optionally equipped for two-channel operation → 5.

The sensors work as sound transmitters and sound receivers. Depending on the application and version, the sensors can be arranged for measurement via one or two traverses → 5.

Transmitter

Sensor

Mounting accessories

The requisite mounting distances must be determined for the sensors. Information on the fluid, the pipe material used and the exact pipe dimensions is needed to determine these values. The values for the sound velocity of the following fluids, pipe materials and lining materials are stored in the transmitter:

Fluid		Pipe material	Lining
■ Water	■ Glycol	■ Carbon steel	■ Mortar
■ Sea water	■ Kerosene	■ Ductile iron	■ Rubber
■ Distilled water	■ Milk	■ Stainless steel	■ Tar Epoxy
■ Ammonia	■ Methanol	■ Alloy C	
■ Alcohol	■ Toluene	■ PVC	
■ Benzene	■ Lube oil	■ PE	
■ Bromide	■ Diesel	■ LDPE	
■ Ethanol	■ Gasoline	■ HDPE	
		■ GRP	
		■ PVDF	
		■ PA	
		■ PP	
		■ PTFE	
		■ Glass pyrex	
		■ Asbestos cement	

If you are using fluids, pipe materials or lining materials other than those listed in the table, and you do not have the corresponding sound velocities for these fluids/materials, you can use the DDU18 and DDU19 sensors to determine the values.

DDU18 (sound velocity measurement)	DDU19 (wall thickness measurement)
Nominal diameter range: DN 50 to 3000 (2 to 120")  A0009784	Wall thickness range: ■ Steel pipes: 2 to 50 mm (0.08 to 2.0") ■ Plastic pipes: 4 to 15 mm (0.16 to 0.60") (only suitable for PTFE and PE pipes to a certain extent)  A0009673

Sensor selection and arrangement

The sensors can be arranged in two ways:

- Mounting arrangement for measurement via one traverse:
the sensors are located on opposite sides of the pipe.
- Mounting arrangement for measurement via two traverses:
the sensors are located on the same side of the pipe.

A0001106

Sensor mounting arrangement

- A *Mounting arrangement for measurement via one traverse*
 B *Mounting arrangement for measurement via two traverses*

The number of traverses required depends on the sensor type, the nominal diameter and the thickness of the pipe wall. We recommend the following types of mounting:

Sensor Type	Nominal Diameter	Sensor Frequency	Sensor ID	Type of Mounting ¹⁾
Prosonic Flow W	DN 50 to 65 (2 to 2½")	2 MHz	W-CL-2F*	2 (or 1) traverses ²⁾
	DN 80 (3")	2 MHz	W-CL-2F*	2 traverses
	DN 100 to 300 (4 to 12")	2 MHz (or 1 MHz)	W-CL-2F* W-CL-1F*	2 traverses ³⁾
	DN 300 to 600 (12 to 24")	1 MHz (or 2 MHz)	W-CL-1F* W-CL-2F*	2 traverses ³⁾
	DN 650 to 4000 (26 to 160")	1 MHz (or 0.5 MHz)	W-CL-1F* W-CL-05F*	1 traverse ³⁾

¹⁾ The installation of clamp-on sensors is principally recommended in the 2 traverse type installation. This type of installation allows the easiest and most comfortable type of mounting and means that a system can also be mounted even if the pipe can only be accessed from one side. However, in certain applications a 1 traverse installation may be preferred. These include:

- Certain plastic pipes with wall thickness > 4 mm (0.16")
- Pipes made of composite materials such as GRP
- Lined pipes
- Applications with fluids with high acoustic damping

²⁾ If the pipe nominal diameter is small (DN 65 / 2½" and smaller), the sensor spacing with Prosonic Flow W can be too small for two traverse installation. In this case, the 1 traverse type of installation must be used.

³⁾ 0.5 MHz sensors are also recommended for applications with composite material pipes such as GRP and may be recommended for certain lined pipes, pipes with wall thickness > 10 mm (0.4"), or applications with media with high acoustic damping. In addition, for these applications we principally recommend mounting the W sensors in a 1 traverse configuration.

⁴⁾ Insertion W sensors are mounted in a 1 traverse configuration → 21.

Two-channel operation

The transmitter is able to operate two independent measuring channels (measuring channel 1 and measuring channel 2). A pair of sensors is connected per measuring channel. Both measuring channels operate independently of one another and are supported by the transmitter to an equal extent.

Two-channel operation can be used for the following measurements:

- Two-channel measurement = flow measurement at two separate measuring points
- Two-path measurement = redundant flow measurement at one measuring point

Two-channel measurement

The flow is measured at two separate measuring points in the case of two-channel measurement.

The measured values of the two measuring channels can be processed and displayed differently.

The following measured values can be output for two-channel measurement:

- Individual measured values per measuring channel (output independently of one another)
- The difference between the two measured values
- The sum of the two measured values

The two measuring channels can be configured individually. This makes it possible to independently configure and select the display, outputs, sensor type and type of installation.

A0001159

Two-channel measurement: example of arranging sensor pairs at two separate measuring points

- A Measuring channel 1: mounting the sensor pair for measurement via two traverses
 B Measuring channel 2: mounting the sensor pair for measurement via one traverse

Two-path measurement

The flow is measured redundantly at one measuring point in the case of two-path measurement.

The measured values of the two measuring channels can be processed and displayed differently.

The following measured values can be output for two-path measurement:

- Individual measured values per measuring channel (output independently of one another)
- The average of the two measured values

The "Averaging" function generally provides you with a more stable measured value. The function is thus suitable for measurements under conditions that are not ideal (e.g. short inlet runs).

The two measuring channels can be configured individually. This makes it possible to independently configure and select the display, outputs, sensor type and type of installation.

It is generally not necessary to individually configure the two measuring channels in the case of two-path measurement. However, in certain situations individual channel configuration can be used to balance out application-specific asymmetries.

A0001160

Two-path measurement: examples of arranging sensor pairs at one measuring point

Input

Measured variable	Flow velocity (transit time difference proportional to flow velocity)
Measuring range	Typically $v = 0$ to 15 m/s (0 to 50 ft/s)
Operable flow range	Over 150 : 1
Input signal	Status input (auxiliary input) $U = 3$ to 30 V DC, $R_i = 5\text{ k}\Omega$, galvanically isolated Configurable for: totalizer(s) reset, measured-value suppression, error-message reset

Output

Output signal	Current output ■ Galvanically isolated ■ Active/passive selectable – Active: 0/4 to 20 mA, $R_L < 700\ \Omega$ (for HART: $R_L \geq 250\ \Omega$) – Passive: 4 to 20 mA, max. 30 V DC, $R_L \leq 150\ \Omega$ ■ Time constant selectable (0.01 to 100 s) ■ Full scale value adjustable ■ Temperature coefficient: typ. 0.005 % o.r./°C (o.r. = of reading) ■ Resolution: 0.5 μA Pulse/frequency output ■ Galvanically isolated ■ Active/passive selectable – Active: 24 V DC, 25 mA (max. 250 mA during 20 ms), $R_L > 100\ \Omega$ – Passive: open collector, 30 V DC, 250 mA ■ Time constant selectable (0.05 to 100 s) ■ Frequency output – End frequency: 2 to 10000 Hz ($f_{\max} = 12500\text{ Hz}$) – On/off ratio 1:1, pulse width max. 10 s ■ Pulse output – Pulse value and pulse polarity selectable – Max. pulse width adjustable (0.05 to 2000 ms) – As of a frequency of $1 / (2 \times \text{pulse width})$, the on/off ratio is 1:1 PROFIBUS DP interface ■ PROFIBUS DP in accordance with EN 50170 Volume 2 ■ Profile version 3.0 ■ Data transmission rate: 9.6 kBaud to 12 MBaud ■ Automatic data transmission rate recognition ■ Signal encoding = NRZ Code ■ Function blocks: 8 $\times$ Analog input (AI), 3 $\times$ Totalizer ■ Output data: volume flow channel 1 or channel 2, sound velocity channel 1 or channel 2, flow velocity channel 1 or channel 2, average volume flow, average sound velocity, average flow velocity, volume flow sum, volume flow difference, totalizer 1 to 3 ■ Input data: positive zero return (ON/OFF), zero point adjustment, measuring mode, totalizer control ■ Bus address adjustable via miniature switches or local display (optional) at the measuring device ■ Available output combination → 9
----------------------	--

PROFIBUS PA interface:

- PROFIBUS PA in accordance with EN 50170 Volume 2, IEC 61158-2 (MBP)
- Galvanically isolated
- Data transmission rate, supported baudrate: 31.25 kBit/s
- Current consumption = 11 mA
- Error current FDE (fault disconnection electronic) = 0 mA
- Signal encoding = Manchester II
- Function blocks: 8 × Analog Input (AI), 3 × Totalizer
- Output data: volume flow channel 1 or channel 2, sound velocity channel 1 or channel 2, flow velocity channel 1 or channel 2, average volume flow, average sound velocity, average flow velocity, volume flow sum, volume flow difference, totalizer 1 to 3
- Input data: positive zero return (ON/OFF), operation control, totalizer control, zero point adjustment control, display value
- Bus address can be set via DIP switch on device

FOUNDATION Fieldbus interface:

- FOUNDATION Fieldbus H1, IEC 61158-2
- Galvanically isolated
- Data transmission rate, supported baudrate: 31.25 kBit/s
- Current consumption = 12 mA
- Error current FDE (fault disconnection electronic) = 0 mA
- Signal encoding = Manchester II
- Function blocks: 8 × Analog Input (AI), 1 × Discrete Output, 1 × PID
- Output data: volume flow channel 1 or channel 2, sound velocity channel 1 or channel 2, flow velocity channel 1 or channel 2, signal strength channel 1 or 2, average volume flow, average sound velocity, average flow velocity, volume flow sum, difference, volume flow, totalizer 1 to 3
- Input data: positive zero return (ON/OFF), reset totalizer, zero point adjustment control
- Link master function (LAS) is supported

Signal on alarm

- Current output → failsafe mode selectable
- Pulse/frequency output → failsafe mode selectable
- Relay output → "deenergized" in the event of a fault or if the power supply fails

Load

See "Output signal"

Switching output**Relay output**

- NC or NO contact available
Factory setting: relay 1 = NO contact, relay 2 = NC contact
- Max. 30 V / 0.5 A AC; 60 V / 0.1 A DC
- Galvanically isolated
- Configurable for: error messages, flow direction, limit values

Low flow cutoff

Switch points for low flow are selectable

Galvanic isolation

All circuits for inputs, outputs, and power supply are galvanically isolated from each other.

Power supply

Electrical connection, measuring unit

Connecting the transmitter, cable cross-section max. 2.5 mm² (14 AWG)

Performance characteristics

Reference operating conditions

- Fluid temperature: +20 to +30 °C
- Ambient temperature: +22 °C ± 2 K
- Warm-up period: 30 minutes
- Sensors and transmitter are grounded.
- The measuring sensors are correctly installed.

Maximum measured error

Measured error – Clamp-on systems

The measured error depends on a number of factors. A distinction is made between the measured error of the device (Prosonic Flow 93 = 0.5 % of the measured value) and an additional installation-specific measured error (typically 1.5 % of the measured value) that is independent of the device.

The installation-specific measured error depends on the installation conditions on site, such as the nominal diameter, wall thickness, real pipe geometry, fluid, etc.

The sum of the two measured errors is the measured error at the measuring point.

A0011347

Example of the measured error in a pipe with a nominal diameter DN > 200 (8")

- a Measured error of the device (0.5 % o.r. ± 3 mm/s)
 b Measured error due to installation conditions (typically 1.5 % o.r.)
 c Measured error at the measuring point: 0.5 % o.r. ± 3 mm/s + 1.5 % o.r. = 2 % o.r. ± 3 mm/s

Measured error at the measuring point

The measured error at the measuring point is made up of the measured error of the device (0.5 % o.r.) and the measured error resulting from the installation conditions on site. Given a flow velocity > 0.3 m/s (1 ft/s) and a Reynolds number > 10000, the following are typical error limits:

Nominal diameter	Device error limits	+	Installation-specific error limits (typical)	→	Error limits at the measuring point (typical)
DN 50 to 200 (2 to 8")	±0.5 o.r. ± 7.5 mm/s	+	±1.5 % o.r.	→	±2 % o.r. ± 7.5 mm/s
> DN 200 (8")	±0.5 o.r. ± 3 mm/s	+	±1.5 % o.r.	→	±2 % o.r. ± 3 mm/s

o.r. = of reading

Measurement Report

If required, the device can be supplied with a measurement report. To certify the performance of the device, a measurement is performed under reference conditions. Here, the sensors are mounted on a pipe with a nominal diameter of DN 100 (4").

The measurement report guarantees the following error limits of the device (at a flow velocity > 0.3 m/s (1 ft/s) and a Reynolds number > 10000):

Nominal diameter	Guaranteed error limits of the device
DN 100 (4")	±0.5 % o.r. ± 7.5 mm/s

o.r. = of reading

Measured error – Insertion system

Nominal diameter	Device error limits	+	Installation-specific error limits (typical)	→	Error limits at the measuring point (typical)
> DN 200 (8")	$\pm 0.5 \text{ o.r.} \pm 3 \text{ mm/s}$	+	$\pm 1.5 \% \text{ o.r.}$	→	$\pm 2 \% \text{ o.r.} \pm 3 \text{ mm/s}$

o.r. = of reading

Measurement Report

If required, the device can be supplied with a measurement report. To certify the performance of the device, a measurement is performed under reference conditions. Here, the sensors are mounted on a pipe with a nominal diameter of DN 250 (10") (single path) or DN 400 (16") (dual path).

The measurement report guarantees the following error limits of the device
[at a flow velocity > 0.3 m/s (1 ft/s) and a Reynolds number > 10000]:

Sensor	Nominal diameter	Guaranteed error limits of the device
Prosonic W (Insertion)	DN 250 (10"), DN 400 (16")	$\pm 0.5 \% \text{ o.r.} \pm 3 \text{ mm/s}$

o.r. = of reading

Repeatability $\pm 0.3 \%$ for flow velocities > 0.3m/s (1 ft/s)

Operating conditions: installation

Installation instructions

Mounting location

Correct flow measurement is possible only if the pipe is full. It is preferable to install the sensors in a riser.

Note!

Entrained air or gas bubbles in the measuring tube can result in an increase in measuring errors.

For this reason, **avoid** the following mounting locations:

- Highest point of a pipeline. Risk of air accumulating.
- Directly upstream of a free pipe outlet in a vertical pipe. Risk of partial pipe filling.

A0001103

Orientation

Vertical

Recommended orientation with upward direction of flow (View A). With this orientation, entrained solids will sink and gases will rise away from the sensor when the fluid is stagnant. The piping can be completely drained and protected against solids buildup.

Horizontal

In the recommended installation range in a horizontal installation position (View B), gas and air collections at the pipe cover and problematic deposits at the bottom of the pipe have a smaller influence on measurement.

A0001105

- A Recommended orientation with upward direction of flow
 B Recommended installation range with horizontal orientation
 C Recommended installation range max. 120°

Inlet and outlet runs

If possible, install the sensor well clear of fittings such as valves, T-pieces, elbows, etc. Compliance with the following inlet and outlet runs is required in order to ensure measuring accuracy.

A0013845

Inlet und outlet runs (top view)

	Connecting cable (sensor/transmitter) ■ Standard (PVC): –20 to +70 °C (–4 to +158 °F) ■ Optional (PTFE): –40 to +170 °C (–40 to +338 °F)
	 Note! ■ It is permitted to insulate the sensors mounted on the pipe. ■ Mount the transmitter in a shady location and avoid direct sunlight, particularly in warm climatic regions.
Storage temperature	The storage temperature corresponds to the ambient temperature range.
Degree of protection	Transmitter IP 67 (NEMA 4X) Optional: IP 68 (NEMA 6X)
	Sensor IP 67 (NEMA 4X) optional: IP 68 (NEMA 6P)
	DDU18 sensor (accessories: sound velocity measurement) IP 68 (NEMA 6P)
	DDU19 sensor (accessories: wall thickness measurement) IP 67 (NEMA 4X)
Shock and vibration resistance	According to IEC 68-2-6
Electromagnetic compatibility (EMC)	Electromagnetic compatibility (EMC requirements) according to IEC/EN 61326 "Emission to class A requirements" and NAMUR Recommendation NE 21/43.

Operating conditions: process

Medium temperature range**Prosonic Flow W sensor**

- Clamp-on: -20 to +80 °C (-4 to +176 °F)
- Insertion version: -40 to +80 °C (-40 to +176 °F)

DDU18 sensor (accessories: sound velocity measurement)

- Standard: -40 to +80 °C (-40 to +176 °F)
- Optional: 0 to +170 °C (+32 to +338 °F)

DDU19 sensor (accessories: wall thickness measurement)

-20 to +60 °C (-4 to +140 °F)

**Medium pressure range
(nominal pressure)**

No pressure limitation for clamp-on systems, however perfect measurement requires that the static fluid pressure is higher than vapor pressure.
For Insertion Systems the maximum nominal pressure is PN 16 (16 bar / 232 psi).

Pressure loss

There is no pressure loss.

To aid mounting, mounting kits are available as accessories → 26.

A0001132

Prosonic Flow W sensor (clamp-on)

A0001154

Mounting arrangement for measurement via two traverses

Dimensions in SI units

A	B	C	D	E	F	G
56	62	145	111	Ø 58	max. 872	min. 0.5
H					I	
Depends on the measuring point conditions (pipe, fluid, etc.). Dimension "H" can be determined: ■ Via transmitter programming Quick Setup (or FieldCare) ■ Online (Applicator)					Pipe outer diameter	

All dimensions in [mm]

Dimensions in US units

A	B	C	D	E	F	G
2.20	2.44	5.71	4.37	Ø 2.28	max. 34.3	min. 0.2
H					I	
Depends on the measuring point conditions (pipe, fluid, etc.). Dimension "H" can be determined: ■ Via transmitter programming Quick Setup (or FieldCare) ■ Online (Applicator)					Pipe outer diameter	

All dimensions in [inch]

A0001155

Mounting arrangement for measurement via one traverse

Dimensions in SI units

A	B	C	D	E	F
56	62	145	111	Ø 58	max. 872
G				H	
Depends on the measuring point conditions (pipe, fluid, etc.). Dimension "G" can be determined: ■ Via transmitter programming Quick Setup (or FieldCare) ■ Online (Applicator)				Pipe outer diameter	

All dimensions in [mm]

Dimensions in US units

A	B	C	D	E	F
2.20	2.44	5.71	4.37	Ø 2.28	max. 34.3
G				H	
Depends on the measuring point conditions (pipe, fluid, etc.). Dimension "G" can be determined: ■ Via transmitter programming Quick Setup (or FieldCare) ■ Online (Applicator)				Pipe outer diameter	

All dimensions in [inch]

Prosonic Flow W sensor (insertion version)

Single path version

A0013846

Dimensions in SI units

A	B	C	D	E	F	G
Ø 58	~ 150	65	25°	Pipe outer diameter	Sensor distance	Path length
Depends on the measuring point conditions (pipe, fluid, etc.). Dimensions "F" and "G" can be determined: ■ Via transmitter programming Quick Setup (or FieldCare) ■ Online (Applicator)						

All dimensions in [mm]

Dimensions in US units

A	B	C	D	E	F	G
Ø 2.28	~ 5.91	2.56	25°	Pipe outer diameter	Sensor spacing	Path length
Depends on the measuring point conditions (pipe, fluid, etc.). Dimensions "F" and "G" can be determined: ■ Via transmitter programming Quick Setup (or FieldCare) ■ Online (Applicator)						

All dimensions in [inch]

Dual path version

A0013847

Dimensions in SI units

A	B	C	D	E	F	G	H
Ø 58	~ 150	80	25°	Pipe outer diameter	Sensor distance	Path length	Arc length
Depends on the measuring point conditions (pipe, fluid, etc.). Dimensions "F", "G" and "H" can be determined: ■ Via transmitter programming Quick Setup (or FieldCare) ■ Online (Applicator)							

All dimensions in [mm]

Dimensions in US units

A	B	C	D	E	F	G	H
Ø 2.28	~ 5.91	3.15	25°	Pipe outer diameter	Sensor distance	Path length	Arc length
Depends on the measuring point conditions (pipe, fluid, etc.). Dimensions "F", "G" and "H" can be determined: ■ Via transmitter programming Quick Setup (or FieldCare) ■ Online (Applicator)							

All dimensions in [inch]

Weight**Transmitter**

- Wall-mount housing: 6.0 kg (13.2 lbs)

Sensor

- Prosonic Flow W clamp-on (incl. mounting material): 2.8 kg (6.2 lbs)
- Prosonic Flow W insertion version (incl. mounting material):
 - Single path version: 4.5 kg (9.92 lbs)
 - Two path version: 12 kg (26.5 lbs)

Sensor (accessories)

- Prosonic Flow DDU18 (incl. mounting material): 2.4 kg (5.3 lbs)
- Prosonic Flow DDU19 (incl. mounting material): 1.5 kg (3.3 lbs)

Note!

Weight information without packaging material.

Materials**Transmitter**

- Wall-mounted housing: powder-coated die-cast aluminum

Sensor

Prosonic Flow W clamp-on version

- Sensor holder: stainless steel 1.4308/CF-8
- Sensor housing: stainless steel 1.4301/304
- Strapping bands/bracket: textile or stainless steel 1.4301/304
- Sensor contact surfaces: chemically stable plastic

Prosonic Flow W insertion version

- Sensor holder: stainless steel 1.4301
- Sensor housing: stainless steel 1.4301/304
- Weld-in parts: stainless steel 1.4301/304
- Sensor contact surfaces: chemically stable plastic

Sensor (accessories)

Prosonic Flow DDU18; Prosonic Flow P DDU19

- Sensor holder: stainless steel 1.4308/CF-8
- Sensor housing: stainless steel 1.4301/304
- Strapping bands/bracket: textile or stainless steel 1.4301/304
- Sensor contact surfaces: chemically stable plastic

Connecting cable (sensor/transmitter)

- PVC connecting cable
 - Cable sheath: PVC
 - Cable connector: nicked brass 2.0401
- PTFE connecting cable
 - Cable sheath: PTFE
 - Cable connector: stainless steel 1.4301

Human interface

Display elements	■ Liquid crystal display: illuminated, four lines each with 16 characters ■ Custom configuration for presenting different measured values and status variables ■ 3 totalizers
Operating elements	■ Local operation with three optical keys ■ Application specific Quick Setup menus for straightforward commissioning
Language group	Language groups available for operation in different countries: ■ Western Europe and America (WEA): English, German, Spanish, Italian, French, Dutch and Portuguese ■ Eastern Europe/Scandinavia (EES): English, Russian, Polish, Norwegian, Finnish, Swedish and Czech ■ South and Eastern Asia (SEA): English, Japanese, Indonesian ■ China (CN): English, Chinese You can change the language group via the FieldCare operating program.
Remote operation	Operation via HART, PROFIBUS DP/PA, FOUNDATION Fieldbus

Certificates and approvals

CE mark	The measuring system is in conformity with the statutory requirements of the EC Directives. Endress+Hauser confirms successful testing of the device by affixing to it the CE mark.
C-Tick mark	The measuring system is in conformity with the EMC requirements of the "Australian Communications and Media Authority" (ACMA).
PROFIBUS DP/PA certification	The flowmeter has successfully passed all the test procedures carried out and is certified and registered by the PNO (PROFIBUS/DP User Organization). The device thus meets all the requirements of the following specifications: ■ Certified to PROFIBUS DP/PA, profile version 3.0 (device certification number: on request) ■ The device can also be operated with certified devices of other manufacturers (interoperability)
FOUNDATION Fieldbus certification	The flowmeter has successfully passed all the test procedures carried out and is certified and registered by the Fieldbus Foundation. The device thus meets all the requirements of the following specifications: ■ Certified to FOUNDATION Fieldbus Specification ■ The device meets all the specifications of the FOUNDATION Fieldbus H1. ■ Interoperability Test Kit (ITK), revision status 5.01 (device certification number: on request) ■ The device can also be operated with certified devices of other manufacturers ■ Physical Layer Conformance Test of the Fieldbus Foundation
Other standards and guidelines	■ EN 60529 Degrees of protection provided by enclosures (IP code) ■ EN 61010-1 Safety requirements for electrical equipment for measurement, control and laboratory use ■ IEC/EN 61326 "Emission in accordance with Class A requirements". Electromagnetic compatibility (EMC requirements). ■ ANSI/ISA-S82.01 Safety Standard for Electrical and Electronic Test, Measuring, Controlling and Related Equipment - General Requirements. Pollution Degree 2, Installation Category II. ■ CAN/CSA-C22.2 No. 1010.1-92 Safety Requirements for Electrical Equipment for Measurement and Control and Laboratory Use. Pollution degree 2, Installation Category II ■ NAMUR NE 21 Electromagnetic compatibility (EMC) of industrial process and laboratory control equipment. ■ NAMUR NE 43 Standardization of the signal level for the breakdown information of digital transmitters with analog output signal. ■ NAMUR NE 53 Software of field devices and signal-processing devices with digital electronics.

Ordering information

The Endress+Hauser sales and service organization can provide detailed ordering information and information on the order codes on request.

Accessories

Various accessories, which can be ordered separately from Endress+Hauser, are available for the transmitter and the sensor. The Endress+Hauser service organization can provide detailed information on the order codes on request.

Device-specific accessories

Accessory	Description	Order code
Wall-mount housing, transmitter Prosonic Flow 93	Transmitter for replacement or for stock. Use the order code to define the following specifications: ■ Approvals ■ Degree of protection/version ■ Cable entry ■ Display / power supply / operation ■ Software ■ Outputs / inputs	Single-channel version: 93XXX - XX1XX***** Two-channel version: 93XXX - XX2XX*****
Conversion kit, inputs/outputs	Conversion kit with appropriate plug-in point modules for converting the current input/output configuration to a new version.	DK9UI - **
Sensor W (DN 50 to 4000 / 2 to 160") Clamp-on version	DN 50 to 300 (2 to 12"), -20 to +80 °C (-4 to +176 °F), 2.0 MHz ■ IP 67 / NEMA 4X ■ IP 68 / NEMA 6P DN 100 to 4000 (4 to 160"), -20 to +80 °C (-4 to +176 °F), 1.0 MHz ■ IP 67 / NEMA 4X ■ IP 68 / NEMA 6P DN 100 to 4000 (4 to 160"), -20 to +80 °C (-4 to +176 °F), 0.5 MHz ■ IP 67 / NEMA 4X ■ IP 68 / NEMA 6P	DK9WS - B* DK9WS - N* DK9WS - A* DK9WS - M* DK9WS - R* DK9WS - T*
Sensor W (DN 200 to 4000 / 8 to 160") Insertion version	DN 200 to 4000 (8 to 160"), -40 to +80 °C (-40 to +176 °F)	DK9WS - K*
Sensor DDU18	Sensor for sound velocity measurement ■ -40 to +80 °C (-40 to +176 °F) ■ 0 to +170 °C (+32 to +338 °F)	50091703 50091704
Sensor DDU19	Sensor for wall thickness measurement.	50091713

Measuring principle-specific accessories

Accessory	Description	Order code
Mounting kit for aluminum field housing	Mounting kit for wall-mount housing. Suitable for: ■ Wall mounting ■ Pipe mounting ■ Panel mounting	DK9WM - A
Sensor holder set	■ Prosonic Flow W (DN 50 to 4000 / 2 to 160") – Sensor holder, fixed retaining nut, clamp-on version – Sensor holder, removable retaining nut, clamp-on version	DK9SH - A DK9SH - B
Clamp-on Installation set	Sensor fastening for Prosonic Flow W (DN 50 to 4000 / 2 to 160") ■ Without sensor fastening ■ Strapping bands DN 50 to 200 (2 to 8") ■ Strapping bands DN 200 to 600 (8 to 24") ■ Strapping bands DN 600 to 2000 (24 to 80") ■ Strapping bands DN 2000 to 4000 (80 to 160") ■ Without mounting tools ■ Spacing ruler DN 50 to 200 (2 to 8") ■ Spacing ruler DN 200 to 600 (8 to 24") ■ Mounting rail DN 50 to 200 (2 to 8") ■ Mounting rail DN 200 to 600 (8 to 24") ■ Fastening, 1 traverse, sensor W DN 50 to 4000 (80 to 160")	DK9IC - A* DK9IC - B* DK9IC - C* DK9IC - D* DK9IC - E* DK9IC - *1 DK9IC - *2 DK9IC - *3 DK9IC - *4 DK9IC - *5 DK9IC - *6
Conduit adapter for connecting cable	Prosonic Flow W (DN 50 to 4000 / 2 to 160") ■ Conduit adapter incl. cable entry M20 × 1.5 ■ Conduit adapter incl. cable entry ½" NPT ■ Conduit adapter incl. cable entry G ½"	DK9CB - BB1 DK9CB - BB2 DK9CB - BB3
Connecting cable	5 m sensor cable, PVC, -20 to +70 °C (-4 to +158 °F) 10 m sensor cable, PVC, -20 to +70 °C (-4 to +158 °F) 15 m sensor cable, PVC, -20 to +70 °C (-4 to +158 °F) 30 m sensor cable, PVC, -20 to +70 °C (-4 to +158 °F) 5 m sensor cable, PTFE, -40 to +170 °C (-40 to +158 °F) 10 m sensor cable, PTFE, -40 to +170 °C (-40 to +158 °F) 15 m sensor cable, PTFE, -40 to +170 °C (-40 to +158 °F) 30 m sensor cable, PTFE, -40 to +170 °C (-40 to +158 °F)	DK9SS - BBA DK9SS - BBB DK9SS - BBC DK9SS - BBD DK9SS - BBE DK9SS - BBF DK9SS - BBG DK9SS - BBH
Acoustic coupling fluid	■ Coupling fluid 0 to 170 °C (+32 to 338 °F), high temperature, standard ■ Adhesive coupling fluid -40 to +80 °C (-40 to +176 °F) ■ Water-soluble coupling fluid -20 to +80 °C (-4 to +176 °F) ■ Coupling fluid DDU 19, -20 to +60 °C (-4 to +140 °F) ■ Coupling fluid -40 to +80 °C (-40 to +176 °F), standard, type MBG2000	DK9CM - 2 DK9CM - 3 DK9CM - 4 DK9CM - 6 DK9CM - 7

Communication-specific accessories

Accessory	Description	Order code
HART handheld terminal DXR375	Handheld terminal for remote configuration and for obtaining measured values via the HART current output (4 to 20 mA) and FOUNDATION Fieldbus. Contact your Endress+Hauser representative for more information.	DXR375 - *****
Fieldgate FXA320	Gateway for remote interrogation of HART sensors and actuators via Web browser: ■ 2-channel analog input (4 to 20 mA) ■ 4 binary inputs with event counter function and frequency measurement ■ Communication via modem, Ethernet or GSM ■ Visualization via Internet/Intranet in the Web browser and/or WAP cellular phone ■ Limit value monitoring with alarm signaling via e-mail or SMS ■ Synchronized time stamping of all measured values.	FXA320 - *****
Fieldgate FXA520	Gateway for remote interrogation of HART sensors and actuators via Web browser: ■ Web server for remote monitoring of up to 30 measuring points ■ Intrinsically safe version [Ex ia] IIC for applications in hazardous areas ■ Communication via modem, Ethernet or GSM ■ Visualization via Internet/Intranet in the Web browser and/or WAP cellular phone ■ Limit value monitoring with alarm signaling via e-mail or SMS ■ Synchronized time stamping of all measured values ■ Remote diagnosis and remote configuration of connected HART devices	FXA520 - *****

Service-specific accessories

Accessory	Description	Order code
Applicator	Software for selecting and planning flowmeters. The Applicator can be downloaded from the Internet or ordered on CD-ROM for installation on a local PC. Contact your Endress+Hauser representative for more information.	DXA80 - *
Fieldcheck	Tester/simulator for testing flowmeters in the field. When used in conjunction with the "FieldCare" software package, test results can be imported into a database, printed out and used for official certification. Contact your Endress+Hauser representative for more information.	50098801
FieldCare	FieldCare is Endress+Hauser's FDT-based plant asset management tool. It can configure all intelligent field units in your system and helps you manage them. By using the status information, it is also a simple but effective way of checking their status and condition.	See the product page on the Endress+Hauser Web site: www.endress.com
FXA193	Service interface from the measuring device to the PC for operation via FieldCare.	FXA193 - *
Communication cable	Communication cable for connecting the Prosonic Flow 93W transmitter to the FXA193 service interface.	DK9ZT - A

Documentation

- Flow measurement (FA005D)
- Operating Instructions for Prosonic Flow 93 (BA070D and BA071D)
- Operating Instructions for Prosonic Flow 93 PROFIBUS PA (BA076D and BA077D)
- Operating Instructions for Prosonic Flow 93 FOUNDATION Fieldbus (BA078D and BA079D)
- Supplementary documentation on Ex-ratings: ATEX, FM, CSA, IECEx, NEPSI
