

Technical Information

Proline Promag W 10

Electromagnetic flowmeter

Flowmeter for basic water and wastewater applications with easy-to-use operation concept

Application

- The bidirectional measuring principle is virtually independent of pressure, density, temperature and viscosity
- Suitable for basic measuring tasks such as raw water infeed

Device properties

- International drinking water approvals
- Degree of protection IP68 (Type 6P enclosure)
- System integration with HART, Modbus RS485, IO-Link
- Flexible operation with app and optional display

Your benefits

- Reliable measurement at constant accuracy with 0 x DN run without pressure loss
- Flexible engineering – sensor with fixed or lap-joint process connections
- Application suitability – EN ISO 12944 corrosion protection for underground or underwater installation
- Improved plant availability – sensor compliant with industry-specific requirements
- Optimum usability – operation with mobile devices and SmartBlue app or display with touchscreen
- Simple, time-saving commissioning – guided parameterization in advance and in the field
- Built-in verification – Heartbeat Technology

Ordering information

Detailed ordering information is available from your nearest sales organization www.addresses.endress.com or in the Product Configurator at www.endress.com:

1. Select the product using the filters and search field.

2. Open the product page.

3. Select **Configuration**.

Product Configurator - the tool for individual product configuration

- Up-to-the-minute configuration data
- Depending on the device: direct input of information specific to the measuring point, such as the measuring range or operating language
- Automatic verification of exclusion criteria
- Automatic creation of the order code and its breakdown in PDF or Excel output format
- Ability to order directly in the Endress+Hauser Online Shop

Function and system design

Measuring principle	10
Product design	10
IT security	11
Device-specific IT security	12

Measuring principle

According to *Faraday's law of magnetic induction*, a voltage is induced in a conductor moving through a magnetic field.

A0028962

U_e	Induced voltage
B	Magnetic induction (magnetic field)
L	Electrode spacing
I	Current
v	Flow velocity

In the electromagnetic measuring principle, the flowing medium is the moving conductor. The induced voltage (U_e) is proportional to the flow velocity (v) and is transmitted to the amplifier via the working electrodes. The flow volume (Q) is calculated via the pipe cross-section (A). The DC magnetic field is generated by a switched direct current of alternating polarity.

Formulae for calculation

- Induced voltage $U_e = B \cdot L \cdot v$
- Volume flow $Q = A \cdot v$

Product design

The device consists of a transmitter and a sensor.

Two device versions are available:

- Compact version – transmitter and sensor form a mechanical unit.
- Remote version - transmitter and sensor are mounted in separate locations.

Compact version

The transmitter and sensor form a mechanical unit.

A0008262

- | | |
|---|-------------|
| 1 | Transmitter |
| 2 | Sensor |

Remote version

The transmitter and sensor are mounted in physically separate locations.

A0028196

- 1 Transmitter
- 2 Sensor connection housing
- 3 Sensor
- 4 Connecting cable

Measuring system

Proline 10 transmitter	Promag W sensor	
		
Compact version	DN 25 to 300 mm (1 to 12 in)	DN 25 to 300 mm (1 to 12 in)
		
Remote version	DN 350 to 3000 mm (14 to 120 in)	

IT security

We only provide a warranty if the device is installed and used as described in the Operating Instructions. The device is equipped with security mechanisms to protect it against any inadvertent changes to the device settings.

IT security measures in line with operators' security standards and designed to provide additional protection for the device and device data transfer must be implemented by the operators themselves.

Device-specific IT security

Access via Bluetooth

Secure signal transmission via Bluetooth uses an encryption method tested by the Fraunhofer Institute.

- Without the SmartBlue App, the device is not visible via Bluetooth.
- Only one point-to-point connection is established between the device and a smartphone or tablet.

Access via the SmartBlue App

Two access levels (user roles) are defined for the device: the **Operator** user role and the **Maintenance** user role. The **Maintenance** user role is configured when the device leaves the factory.

If a user-specific access code is not defined (in the Enter access code parameter), the default setting **0000** continues to apply and the **Maintenance** user role is automatically enabled. The device's configuration data are not write-protected and can be edited at all times.

If a user-specific access code has been defined (in the Enter access code parameter), all the parameters are write-protected. The device is accessed with the **Operator** user role. When the user-specific access code is entered a second time, the **Maintenance** user role is enabled. All parameters can be written to.

For detailed information, see the "Description of Device Parameters" document pertaining to the device.

Protecting access via a password

There are a variety of ways to protect against write access to the device parameters:

- User-specific access code:
Protect write access to the device parameters via all the interfaces.
- Bluetooth key:
The password protects access and the connection between an operating unit, e.g. a smartphone or tablet, and the device via the Bluetooth interface.

General notes on the use of passwords

- The access code and Bluetooth key that are valid when the device is delivered must be redefined during commissioning.
- Follow the general rules for generating a secure password when defining and managing the access code and Bluetooth key.
- The user is responsible for the management and careful handling of the access code and Bluetooth key.

Write protection switch

The entire operating menu can be locked via the write protection switch. The values of the parameters cannot be changed. Write protection is disabled when the device leaves the factory.

Write protection is enabled with the write protection switch on the back of the display module.

Input

Measured variable	14
Operable flow range	14
Measuring range	14

Measured variable

Direct measured variables	■ Volume flow (proportional to induced voltage) ■ Conductivity (order code for "Sensor option", option CX)
Calculated measured variables	Mass flow

Operable flow range

Over 1000 : 1

Measuring range

Typically $v = 0.01$ to 10 m/s (0.03 to 33 ft/s) with specified measuring accuracy

Electrical conductivity:

- ≥ 5 $\mu\text{S/cm}$ for liquids in general
- ≥ 20 $\mu\text{S/cm}$ for demineralized water

Flow characteristic values in SI units: DN 25 to 125 (1 to 4")

Nominal diameter		Recommended flow rate	Factory settings		
		min./max. full scale value ($v \sim 0.3/10$ m/s)	Full scale value current output ($v \sim 2.5$ m/s)	Pulse value (~ 2 pulse/s)	Low flow cut off ($v \sim 0.04$ m/s)

Output

Output versions	20
Output signal	20
Signal on alarm	23
Low flow cut off	23
Galvanic isolation	23
Protocol-specific data	24

Output versions

Order code 020: output; input	Output version
Option B	■ Current output 4 to 20 mA HART ■ Pulse/frequency/switch output
Option F	IO-Link
Option M	■ Modbus RS485 ■ Current output 4 to 20 mA

Output signal

Current output 4 to 20 mA HART / 4 to 20 mA HART Ex-i

Signal mode	Choose via terminal assignment: ■ Active ■ Passive
Current range	Can be set to: ■ 4 to 20 mA NAMUR ■ 4 to 20 mA US ■ 4 to 20 mA ■ Fixed current
Max. output current	21.5 mA
Open-circuit voltage	DC < 28.8 V (active)
Max. input voltage	DC 30 V (passive)
Max. load	400 Ω
Resolution	1 µA
Damping	Configurable: 0 to 999.9 s
Assignable measured variables	■ Off ■ Volume flow ■ Mass flow ■ Conductivity* ■ Noise* ■ Coil current shot time* * Visibility depends on order options or device settings

IO-Link

Physical interface	Similar to the standard IEC 61131-9
Signal	Digital communication signal IO-Link, 3-wire
IO-Link version	1.1
IO-Link SSP version	Smart Sensor Profile 2nd Edition V1.2
IO-Link device port	IO-Link port class A

Modbus RS485

Physical interface	RS485 in accordance with EIA/TIA-485 standard
--------------------	---

Current output 4 to 20 mA ¹⁾

Signal mode	Choose via terminal assignment: ■ Active ■ Passive
Current range	Can be set to: ■ 4 to 20 mA NAMUR ■ 4 to 20 mA US ■ 4 to 20 mA ■ Fixed current
Max. output current	21.5 mA
Open-circuit voltage	DC < 28.8 V (active)
Max. input voltage	DC 30 V (passive)
Max. load	400 Ω
Resolution	1 µA
Damping	Configurable: 0 to 999.9 s
Assignable measured variables	■ Off ■ Volume flow ■ Mass flow ■ Conductivity* ■ Noise* ■ Coil current shot time* * Visibility depends on order options or device settings

Pulse/frequency/switch output ²⁾

Function	Can be set to: ■ Pulse output ■ Frequency output ■ Switching output
Version	Open collector: Passive
Input values	■ DC 10.4 to 30 V ■ Max. 140 mA
Voltage drop	■ ≤ DC 2 V @ 100 mA ■ ≤ DC 2.5 V @ max. input current

Pulse output	
Pulse width	Configurable: 0.05 to 2 000 ms
Max. pulse rate	10 000 Impulse/s
Pulse value	Configurable
Assignable measured variables	■ Volume flow ■ Mass flow

Frequency output	
Output frequency	Configurable: end value frequency 2 to 10 000 Hz ($f_{\max} = 12\,500$ Hz)
Damping	Configurable: 0 to 999.9 s

1) Only available with Modbus RS485

2) Only available with 4 to 20 mA HART

Pulse/pause ratio	1:1
Assignable measured variables	■ Off ■ Volume flow ■ Mass flow ■ Conductivity* ■ Noise* ■ Coil current shot time* ■ Reference electrode potential against PE* * Visibility depends on order options or device settings
Switch output	
Switching behavior	Binary, conductive or non-conductive
Switching delay	Configurable: 0 to 100 s
Number of switching cycles	Unlimited
Assignable functions	■ Off ■ On ■ Diagnostic behavior: ■ Alarm ■ Warning ■ Warning and alarm ■ Limit value: ■ Off ■ Volume flow ■ Mass flow ■ Flow velocity ■ Conductivity* ■ Corrected conductivity* ■ Totalizer 1...3 ■ Flow direction monitoring ■ Status ■ Empty pipe detection ■ Low flow cut off * Visibility depends on order options or device settings

Signal on alarm

Output behavior in the event of a device alarm (failure mode)

HART

Device diagnostics	Device condition can be read out via HART Command 48
--------------------	--

IO-Link

Operating mode	Digital transmission of all failure information
Device status	Readable via cyclic and acyclic data transmission

Modbus RS485

Failure mode	Selectable: ▪ NaN value instead of current value ▪ Last valid value
--------------	--

Current output 4 to 20 mA

4 to 20 mA	Selectable: ▪ Min. value: 3.59 mA ▪ Max. value: 21.5 mA ▪ Freely definable value between: 3.59 to 21.5 mA ▪ Actual value ▪ Last valid value
------------	---

Pulse/frequency/switch output

Pulse output	Selectable: ▪ Actual value ▪ No pulses
Frequency output	Selectable: ▪ Actual value ▪ 0 Hz ▪ Defined value: 0 to 12 500 Hz
Switch output	Selectable: ▪ Current status ▪ Open ▪ Closed

Low flow cut off

The switch points for low flow cut off are user-selectable.

Galvanic isolation

The outputs are galvanically isolated from one another and from earth.

Protocol-specific data

HART

Bus structure	The HART signal is superimposed on the 4 to 20 mA current output.
Manufacturer ID	0x11
Device type ID	0x71
HART protocol revision	7
Device description files (DTM, DD)	Information and files under: www.endress.com
HART load	At least 250 Ω
System integration	Measured variables via HART protocol

IO-Link

IO-Link specification	Version 1.1.3
Device ID	9728257
Manufacturer ID	17
Smart Sensor Profile	Smart Sensor Profile 2nd Edition V1.2; supported ■ Identification and Diagnosis ■ Digital Measuring and Switching Sensor (as per SSP type 4.3.4) ■ Function Class Sensor Control Wide
Smart Sensor Profile Type	Measuring profile type 4.3.4 Measuring and Switching Sensor, floating point, 4 channel
SIO mode	No
Speed	COM2 (38.4 kBaud)
Minimum cycle time	12 ms
Process data width	Input: 18 bytes (as per SSP 4.3.4) Output: 2 bytes (as per SSP 4.3.4)
OnRequestdata	8 bytes
Data storage	Yes
Block configuration	Yes
Device operational	The device is operational 6 s after the supply voltage has been applied
System integration	Cyclic input measured variables: ■ Volume flow [m³/h] ■ Conductivity [S/m], depending on order options or device settings ■ Temperature [°C], depending on the sensor option selected ■ Totalizer 1 [m³] Cyclic output measured variables: ■ Totalizer submenu – Totalize option ■ Totalizer submenu – Reset + hold option ■ Totalizer submenu – Reset + totalize option ■ Totalizer submenu – Hold option ■ Flow override ■ Device search

Device description

In order to integrate field devices into a digital communication system, the IO-Link system needs a description of the device parameters, such as output data, input data, data format, data volume and supported transmission rate.

These data are available in the device description (IODD) which is provided to the IO-Link Master when the communication system is commissioned.

The IODD can be downloaded as follows:

- www.endress.com
- <https://ioddfinder.io-link.com>

Modbus RS485

Physical interface	RS485 in accordance with EIA/TIA-485 standard
Terminating resistor	Not integrated
Protocol	Modbus Applications Protocol Specification V1.1
Response times	▪ Direct data access: typically 25 to 50 ms ▪ Auto-scan buffer (data range): typically 3 to 5 ms
Device type	Slave
Slave address range	1 to 247
Broadcast address range	0
Function codes	▪ 03: Read holding register ▪ 04: Read input register ▪ 06: Write single registers ▪ 08: Diagnostics ▪ 16: Write multiple registers ▪ 23: Read/write multiple registers
Broadcast messages	Supported by the following function codes: ▪ 06: Write single registers ▪ 16: Write multiple registers ▪ 23: Read/write multiple registers
Supported baud rate	▪ 1 200 BAUD ▪ 2 400 BAUD ▪ 4 800 BAUD ▪ 9 600 BAUD ▪ 19 200 BAUD ▪ 38 400 BAUD ▪ 57 600 BAUD ▪ 115 200 BAUD
Data transfer mode	RTU
Data access	Each parameter can be accessed via Modbus RS485.  For Modbus register information
System integration	Information on system integration . ▪ Modbus RS485 information ▪ Function codes ▪ Register information ▪ Response time ▪ Modbus data map

Power supply

Terminal assignment	28
Supply voltage	28
Power consumption	29
Current consumption	29
Power supply failure	29
Electrical connection	29
Potential equalization	33
Terminals	35
Cable entries	35
Overvoltage protection	36

Terminal assignment

The terminal assignment is documented on an adhesive label.

The following terminal assignment is available:

Current output 4 to 20 mA HART (active) and pulse/frequency/switch output

Supply voltage		Output 1				Output 2	
1 (+)	2 (-)	26 (+)	27 (-)	24 (+)	25 (-)	22 (+)	23 (-)
L/+	N/-	Current output 4 to 20 mA HART (active)		-		Pulse/frequency/switch output (passive)	

Current output 4 to 20 mA HART (passive) and pulse/frequency/switch output

Supply voltage		Output 1				Output 2	
1 (+)	2 (-)	26 (+)	27 (-)	24 (+)	25 (-)	22 (+)	23 (-)
L/+	N/-	-		Current output 4 to 20 mA HART (passive)		Pulse/frequency/switch output (passive)	

Modbus RS485 and current output 4 to 20 mA (active)

Supply voltage		Output 1				Output 2	
1 (+)	2 (-)	26 (+)	27 (-)	24 (+)	25 (-)	22 (B)	23 (A)
L/+	N/-	Current output 4 to 20 mA (active)		-		Modbus RS485	

Modbus RS485 and current output 4 to 20 mA (passive)

Supply voltage		Output 1				Output 2	
1 (+)	2 (-)	26 (+)	27 (-)	24 (+)	25 (-)	22 (B)	23 (A)
L/+	N/-	-		Current output 4 to 20 mA (passive)		Modbus RS485	

Supply voltage

Order code for "Power supply"	Terminal voltage		Frequency range
Option A IO-Link port class A	DC 18 to 30 V ¹⁾		-
Option D	DC 24 V	-20 to +30 %	-
Option E	AC 100 to 240 V	-15 to +10 %	50/60 Hz, ±5 Hz
Option I	DC 24 V	-20 to +30 %	-
	AC 100 to 240 V	-15 to +10 %	50/60 Hz, ±5 Hz
Option M non-hazardous area	DC 24 V	-20 to +30 %	-
	AC 100 to 240 V	-15 to +10 %	50/60 Hz, ±5 Hz

- 1) These values are absolute minimum and maximum values. No tolerance applies. The DC power unit must be tested to ensure it meets technical safety requirements (e.g. PELV, SELV) with limited power sources (e.g. Class 2).

Power consumption

- Transmitter:
 - HART, Modbus RS485: Max. 10 W (active power)
 - IO-Link: Max. 6 W (active power)
- Switch-on current:
 - HART, Modbus RS485: Max. 36 A (< 5 ms) as per NAMUR Recommendation NE 21
 - IO-Link: Max. 400 mA

Current consumption

- Max. 400 mA (24 V)
- Max. 200 mA (110 V, 50/60 Hz; 230 V, 50/60 Hz)
- Max 200 mA. (18 to 30 V, IO-Link port class A)

Power supply failure

- Totalizers stop at the last value measured.
- Device configuration remains unchanged.
- Error messages (incl. total operated hours) are stored.

A0055852

6 Connection example for 4 to 20 mA current output (passive)

- 1 Automation system with current input (e.g. PLC)
- 2 Power supply
- 3 Optional additional display unit: Observe maximum load
- 4 Transmitter with current output (passive)

Pulse output/frequency output/switch output

7 Connection example for pulse output/frequency output/switch output (passive)

- 1 Automation system with pulse input/frequency input/switch input (e.g. PLC)
- 2 Power supply
- 3 Transmitter with pulse output/frequency output/switch output (passive)

Potential equalization

Introduction

Correct potential equalization (equipotential bonding) is a prerequisite for stable and reliable flow measurement. Inadequate or incorrect potential equalization can result in device failure and present a safety hazard.

The following requirements must be observed to ensure correct, trouble-free measurement:

- The principle that the medium, the sensor and the transmitter must be at the same electric potential applies.
- Take in-company grounding guidelines, materials and the grounding conditions and potential conditions of the pipe into consideration.
- The necessary potential equalization connections must be established using a ground cable with a minimum cross-section of 6 mm² (0.0093 in²). Also use a cable lug.
- In the case of remote device versions, the ground terminal in the example always refers to the sensor and not to the transmitter.

i Accessories such as ground cables and ground disks can be ordered from Endress +Hauser → *Device-specific accessories*, 134

Abbreviations used

- PE (Protective Earth): potential at the potential equalization terminals of the device
- P_P (Potential Pipe): potential of the pipe, measured at the flanges
- P_M (Potential Medium): potential of the medium

Connection examples for standard situations

Unlined and grounded metal pipe

- Potential equalization is via the measuring tube.
- The medium is set to ground potential.

Starting conditions:

- Pipes are correctly grounded on both sides.
- Pipes are conductive and at the same electric potential as the medium
- ▶ Connect the connection housing of the transmitter or sensor to ground potential via the ground terminal provided for this purpose.

Unlined metal pipe

- Potential equalization is via the ground terminal and pipe flanges.
- The medium is set to ground potential.

Starting conditions:

- Pipes are not sufficiently grounded.
 - Pipes are conductive and at the same electric potential as the medium
1. Connect both sensor flanges to the pipe flange via a ground cable and ground them.
 2. Connect the connection housing of the transmitter or sensor to ground potential via the ground terminal provided for this purpose.
 3. For DN $\leq$ 300 (12"): Mount the ground cable directly on the conductive flange coating of the sensor with the flange screws.
 4. For DN $\geq$ 350 (14"): Mount the ground cable directly on the metal transport bracket. Observe the screw tightening torques: see the Brief Operating Instructions for the sensor.

Plastic pipe or pipe with insulating liner

- Potential equalization is via the ground terminal and ground disks.
- The medium is set to ground potential.

Starting conditions:

- The pipe has an insulating effect.
 - Low-impedance medium grounding close to the sensor is not guaranteed.
 - Equalizing currents through the medium cannot be ruled out.
1. Connect the ground disks via the ground cable to the ground terminal of the connection housing of the transmitter or sensor.
 2. Connect the connection to ground potential.

Connection example with the potential of medium not equal to potential equalization connection without the "Floating measurement" option

In these cases, the medium potential can differ from the potential of the device.

Metal, ungrounded pipe

The sensor and transmitter are installed in a way that provides electrical insulation from PE, e.g. applications for electrolytic processes or systems with cathodic protection.

Starting conditions:

- Unlined metal pipe
 - Pipes with an electrically conductive liner
1. Connect the pipe flanges and transmitter via the ground cable.
 2. Route the shielding of the signal lines via a capacitor (recommended value 1.5 μ F/50V).
 3. Device connected to power supply such that it is floating in relation to the potential equalization connection (isolation transformer). This measure is not required in the case of 24V DC supply voltage without PE (= SELV power unit).

Connection examples with the potential of medium not equal to potential equalization connection with the "Floating measurement" option

In these cases, the medium potential can differ from the potential of the device.

Introduction

The "Floating measurement" option enables the galvanic isolation of the measuring system from the device potential. This minimizes harmful equalizing currents caused by

differences in potential between the medium and the device. The "Floating measurement" option is optionally available: order code for "Sensor option", option CV

Operating conditions for use of the "Floating measurement" option

Device version	Compact version and remote version (length of connecting cable ≤ 10 m)
Differences in voltage between medium potential and device potential	As small as possible, usually in the mV range
Alternating voltage frequencies in the medium or at ground potential (PE)	Below typical power line frequency in the country

i To achieve the specified conductivity measuring accuracy, a conductivity calibration is recommended when the device is installed.

A full pipe adjustment is recommended when the device is installed.

Plastic pipe

Sensor and transmitter are correctly grounded. A difference in potential can occur between the medium and potential equalization connection. Potential equalization between P_M and PE via the reference electrode is minimized with the "Floating measurement" option.

Starting conditions:

- The pipe has an insulating effect.
- Equalizing currents through the medium cannot be ruled out.

1. Use the "Floating measurement" option, while also observing the operating conditions for floating measurement.
2. Connect the connection housing of the transmitter or sensor to ground potential via the ground terminal provided for this purpose.

Metal, ungrounded pipe with insulating liner

The sensor and transmitter are installed in a way that provides electrical insulation from PE. The medium and pipe have different potentials. The "Floating measurement" option minimizes harmful equalizing currents between P_M and P_p via the reference electrode.

Starting conditions:

- Metal pipe with insulating liner
- Equalizing currents through the medium cannot be ruled out.

1. Connect the pipe flanges and transmitter via the ground cable.
2. Route the shielding of the signal cables via a capacitor (recommended value $1.5\mu\text{F}/50\text{V}$).
3. Device connected to power supply such that it is floating in relation to the potential equalization connection (isolation transformer). This measure is not required in the case of 24V DC supply voltage without PE (= SELV power unit).
4. Use the "Floating measurement" option, while also observing the operating conditions for floating measurement.

Terminals

Spring terminals

- Suitable for strands and strands with ferrules.
- Conductor cross-section 0.2 to 2.5 mm^2 (24 to 12 AWG).

Cable entries

- Cable gland: $M20 \times 1.5$ for cable $\varnothing 6$ to 12 mm (0.24 to 0.47 in)
- Thread for cable entry:
 - NPT $\frac{1}{2}$ "
 - G $\frac{1}{2}$ ", G $\frac{1}{2}$ " Ex d
 - M20
- M12 plug-in connector (IO-Link only)

Overvoltage protection

Mains voltage fluctuations	→ <i>Supply voltage</i> ,  28
Overvoltage category	Overvoltage category II
Short-term, temporary overvoltage	Between cable and neutral conductor up to 1200 V for max. 5s
Long-term, temporary overvoltage	Up to 500 V between cable and ground

Cable specifications

Requirements for connecting cable	38
Ground cable requirements	38
Connecting cable requirements	38

Requirements for connecting cable

Electrical safety

As per applicable national regulations.

Permitted temperature range

- Observe the installation guidelines that apply in the country of installation.
- The cables must be suitable for the minimum temperatures and maximum temperatures to be expected.

Power supply cable (incl. conductor for the inner ground terminal)

- A standard installation cable is sufficient.
- Provide grounding according to applicable national codes and regulations.

Signal cable

- Current output 4 to 20 mA HART:
A shielded cable is recommended, observe the grounding concept of the facility.
- Pulse/frequency/switch output:
Standard installation cable
- IO-Link:
Twisted three- or four-core cable M12 A-coded according to IEC 61076-2-101 recommended with
 - Conductor cross-section: 0.34 mm² (AWG22)
 - Max. cable length: 20 m
- Modbus RS485:
Cable type A according to EIA/TIA-485 standard is recommended
- Current output 4 to 20 mA:
Standard installation cable

Ground cable requirements

Copper wire: at least 6 mm² (0.0093 in²)

Connecting cable requirements

Connecting cable only necessary for remote version.

Electrode cable	Coil current cable
1 GND (green): Ground-wire 0.38 mm² (AWG 21) 2 E1 (brown): "Electrode E1" - core 0.38 mm² (AWG 21) 3 E (yellow): grounding 0.38 mm² (AWG 21) 4 E2 (white): "Electrode E2" - core 0.38 mm² (AWG 21) a Outer jacket b Cable shield c Core jacket d Core shield e Core insulation f Core A0054679	1 ER+ (black): coil current core 0.75 mm² (AWG 18) 2 ER- (black): coil current core 0.75 mm² (AWG 18) 3 NC (yellow-green): not connected 0.75 mm² (AWG 18) a Outer jacket b Cable shield c Core insulation d Core e Core reinforcement A0054680

Preterminated connecting cables

Two connecting cable versions can be ordered from Endress+Hauser for use with IP68 protection:

- Cable is already connected to the sensor.
- Cable is connected by the customer (incl. tools for sealing the connection compartment).

Armored connecting cable

Armored connecting cables with additional, metal reinforcing braid can be ordered from Endress+Hauser. Armored connecting cables are used:

- When laying the cable directly in the ground
- Where there is a risk of damage from rodents
- If using the device below IP68 degree of protection

Electrode cable

Design	3×0.38 mm ² (21 AWG) with common, braided copper shield (∅ ~ 9.5 mm (0.37 in)) and individual shielded cores If using the empty pipe detection (EPD) function: 4×0.38 mm ² (21 AWG) with common, braided copper shield (∅ ~ 9.5 mm (0.37 in)) and individual shielded cores
Conductor resistance	≤ 50 Ω/km (0.015 Ω/ft)
Capacitance: core/shield	≤ 420 pF/m (128 pF/ft)
Cable length	Depends on the medium conductivity: maximum 200 m (656 ft)
Cable lengths (available for order)	5 m (15 ft), 10 m (30 ft), 20 m (60 ft) or variable length: maximum 200 m (656 ft) Armored cables: variable length up to maximum 200 m (656 ft)
Operating temperature	−20 to +80 °C (−4 to +176 °F)

Coil current cable

Design	3×0.75 mm ² (18 AWG) with common, braided copper shield (∅ ~ 9.5 mm (0.37 in)) and individual shielded cores
Conductor resistance	≤ 37 Ω/km (0.011 Ω/ft)
Capacitance: core/shield	≤ 120 pF/m (37 pF/ft)

Cable length	Depends on the medium conductivity, max. 200 m (656 ft)
Cable lengths (available for order)	5 m (15 ft), 10 m (30 ft), 20 m (60 ft) or variable length up to max. 200 m (656 ft) Armored cables: variable length up to max. 200 m (656 ft)
Operating temperature	-20 to +80 °C (-4 to +176 °F)
Test voltage for cable insulation	≤ AC 1 433 V rms 50/60 Hz or ≥ DC 2 026 V

Performance characteristics

Reference operating conditions	42
Maximum measurement error	42
Repeatability	43
Influence of ambient temperature	43

Reference operating conditions

- Error limits based on ISO 20456:2017
- Water, typically: +15 to +45 °C (+59 to +113 °F); 0.5 to 7 bar (73 to 101 psi)
- Data as indicated in the calibration protocol
- Accuracy based on accredited calibration rigs according to ISO 17025

i To obtain measured errors, use the *Applicator* sizing tool → *Service-specific accessory*, 136

Maximum measurement error

o. r. = of reading

Maximum permissible error under reference operating conditions

Volume flow

±0.5 % o. r. ±1 mm/s (±0.04 in/s)

i Fluctuations in the supply voltage have no effect within the specified range.

A0045827

8 Maximum measurement error in % o.r.

Electrical conductivity

Order code for "Conductivity measurement", option CX

The values apply for:

- Measurements at a reference temperature of +25 °C (+77 °F).
If the temperature differs, the temperature coefficient of the medium must be taken into account (typically 2.1%/K).
- Device version: compact (transmitter and sensor form a mechanical unit)
- Devices in a metal pipe or in a non-metal pipe with installed ground disks.
- Devices whose potential equalization has been established according to the specifications in the related Operating Instructions.

Conductivity [$\mu\text{S}/\text{cm}$]	Measurement error [%] o. r.
5 to 20	± 20%
20 to 20 000	± 10%
20 000 to 100 000	± 20%

A0042279

9 Measurement error for order code "Conductivity measurement", option CX

Accuracy of outputs

Current output	$\pm 5 \mu\text{A}$
Pulse/frequency output	Max. ± 100 ppm o. r. (across the entire ambient temperature range)

Repeatability

Volume flow	Max. ± 0.1 % o. r. ± 0.5 mm/s (0.02 in/s)
Electrical conductivity	Max. ± 5 % o. r. (5 to 100 000 $\mu\text{S/cm}$)

Influence of ambient temperature

Current output	Temperature coefficient max. $1 \mu\text{A}/^\circ\text{C}$
Pulse/frequency output	No additional effect. Is included in the accuracy.

Installation

Installation conditions

46

Installation conditions

Flow direction

Install the device in the direction of flow.

Note the direction of arrow on the nameplate.

Installation with inlet runs and outlet runs

Installation requires inlet and outlet runs: devices with the order code for "Design", option D, E, F and G.

Ensure straight, undisturbed inlet and outlet runs.

To avoid negative pressure and to comply with accuracy specifications, install the sensor upstream from assemblies that produce turbulence (e.g. valves, T-sections) and downstream from pumps → *Installation near pumps*, 49.

Keep a sufficient distance to the next pipe elbow.

Installation without inlet runs and outlet runs

Depending on the device design and installation location, the inlet and outlet runs can be reduced or omitted entirely.

Maximum measurement error

When the device is installed with the inlet and outlet runs described, a maximum measurement error of $\pm 0.5\%$ of the reading ± 1 mm/s (0.04 in/s) can be guaranteed.

Devices and possible order options

Order code for "Design"		
Option	Description	Design
H	Lap joint flange, 0 x DN inlet/outlet runs	0 x DN full-bore design ¹⁾
I	Fixed flange, 0 x DN inlet/outlet runs	
J	Fixed flange, short installed length, 0 x DN inlet/outlet runs	
K	Fixed flange, long installed length, 0 x DN inlet/outlet runs	

1) "Full-bore" indicates a measuring tube cross-section corresponding to the nominal diameter without constriction. This means there is no pressure loss.

Installation before or after bends
Installation without inlet and outlet runs is possible.

Installation downstream of pumps
Installation without inlet and outlet runs is possible.

An inlet run of $\geq 2 \times \text{DN}$ is recommended.

Installation upstream of valves
Installation without inlet and outlet runs is possible.

An outlet run of $\geq 1 \times \text{DN}$ is recommended.

Installation downstream of valves
The device can be installed without inlet and outlet runs if the valve is 100% open during operation.

An inlet run of $\geq 2 \times \text{DN}$ is recommended if the valve is 100% open during operation.

Orientations

Vertical orientation, upward direction of flow
For all applications.

Horizontal orientation, transmitter at top

This orientation is suitable for the following applications:

- For medium and low process temperatures, in order to maintain the minimum ambient temperature for the transmitter.
- For empty pipe detection, even in the case of empty or partially filled measuring pipes.

Horizontal orientation, transmitter at bottom

This orientation is suitable for the following applications:

- For medium and high process temperatures, in order to maintain the maximum ambient temperature for the transmitter.
- To prevent the electronics module from overheating in the case of a sharp rise in temperature (e.g. CIP or SIP processes), install the measuring instrument with the transmitter component pointing downwards.

This orientation is not suitable for the following applications:

If empty pipe detection is to be used.

Horizontal orientation, transmitter at side

This orientation is not suitable

Vertical

Optimum for self-emptying pipe systems and for use in conjunction with empty pipe detection.

A0015591

Horizontal

- Ideally, the measuring electrode plane should be horizontal. This prevents brief insulation of the measuring electrodes by entrained air bubbles.
- Empty pipe detection only works if the transmitter housing is pointing upwards as otherwise there is no guarantee that the empty pipe detection function will actually respond to a partially filled or empty measuring tube.

A0029344

- 1 EPD electrode for empty pipe detection
- 2 Measuring electrodes for signal detection
- 3 Reference electrode for potential equalization

Mounting locations

- Do not install the device at the highest point of the pipe.
- Do not install the device upstream from a free pipe outlet in a down pipe.

A0042131

The device should ideally be installed in an ascending pipe.

A0042317

Installation near control valves

Install the device in the direction of flow upstream from the control valve.

Installation upstream from a down pipe

NOTICE

Negative pressure in the measuring pipe can damage the liner!

- ▶ If installing upstream from down pipes with a length $h \geq 5 \text{ m}$ (16.4 ft): install a siphon with a vent valve downstream from the device.

This arrangement prevents the flow of liquid stopping in the pipe and air entrainment.

Installation with partially filled pipes

- Partially filled pipes with a gradient require a drain-type configuration.
- The installation of a cleaning valve is recommended.

For devices with the order code for "Design", option H, I, J or K no inlet or outlet runs need to be considered.

Installation near pumps

NOTICE

A vacuum in the measuring tube can damage the liner!

- ▶ Install the device in the direction of flow downstream from the pump.
- ▶ Install pulsation dampers if reciprocating, diaphragm or peristaltic pumps are used.

- Information on the liner's resistance to partial vacuum → *Pressure tightness*, 63
- Information on the measuring system's resistance to vibration and shock → *Vibration resistance and shock resistance*, 55

Installation of heavy devices

Support is required with nominal diameters of $\text{DN} \geq 350$ (14") and higher.

NOTICE

Damage to the device!

If incorrect support is provided, the sensor housing could buckle and the internal magnetic coils could be damaged.

- ▶ Only provide supports at the pipe flanges.

Pipe vibrations

A remote version is recommended in the event of strong pipe vibrations.

NOTICE

Pipe vibrations can damage the device!

- ▶ Do not expose the device to strong vibrations.
- ▶ Support the pipe and fix it in place.
- ▶ Support the device and fix it in place.
- ▶ Mount the sensor and transmitter separately.

A0041092

Adapters

Suitable adapters (double-flange reducers) can be used to install the sensor in larger-diameter pipes. The resulting higher rate of flow improves measuring accuracy with very slow-moving media.

i The nomogram shown here can be used to calculate the pressure loss caused by reducers and expanders. It only applies to liquids with a viscosity similar to that of water.

1. Calculate the ratio of the diameters d/D .
2. Determine the flow velocity after the reduction.
3. From the chart, determine the pressure loss as a function of the flow velocity v and the d/D ratio.

A0041086

Seals

Note the following when installing seals:

- For liner with polyurethane: no seal is required.
- For "PTFE" liner: no seal is required.
- For liner with hard rubber: seal is **always** required.
- For DIN flanges: only install seals according to DIN EN 1514-1.

Thermal insulation

The sensor and pipe must be insulated in the event of very hot media. The insulation helps to slow energy loss and prevent injuries from accidental contact with hot pipes.

A0041093

NOTICE

If the meter electronics overheat this can damage the device!

- ▶ Keep the housing support completely free (heat dissipation).
- ▶ Provide insulation but make sure it does not go beyond the upper edge of the two sensor half-shells.

Magnetism and static electricity

Do not install the device near magnetic fields, e.g. Engines, transformers.

A0042152

Outdoor use

A0023989

- Avoid exposure to direct sunlight.
- Install in a location protected from sunlight.
- Avoid direct exposure to weather conditions.
- Use a weather protection cover → *Transmitter*, 134.

Immersion in water

Only the remote version with IP68, type 6P, is suitable for immersion in water.

NOTICE

If the maximum water depth and operating duration are exceeded, this will damage the device!

- ▶ Observe the maximum water depth and operating duration.

Order code for "Sensor option", options CB, CC

Use of device under water at a maximum water depth of:

- 3 m (10 ft): permanent use
- 10 m (30 ft): max. 48 hours

Order code for "Sensor option", option CQ "IP68, Type 6P, factory-potted"

- For permanent operation of the device under rain or surface water
- Operation at a maximum depth of 3 m (10 ft)

Order code for "Sensor option", options CD, CE

- For the operation of the device under water and in saline water
- Operating duration at a maximum depth of:
 - 3 m (10 ft): permanent use
 - 10 m (30 ft): maximum 48 hours

A0042412

Use in buried applications

Only the remote version with IP68 is suitable for use in buried applications.

Order code for "Sensor option", options CD, CE

The device can be used in buried applications without the need to implement additional precautionary measures on the device.

Installation is performed according to regional installation regulations.

A0042646

Environment

Ambient temperature range	54
Storage temperature	54
Relative humidity	54
Operating height	54
Atmosphere	54
Degree of protection	54
Vibration resistance and shock resistance	55
Electromagnetic compatibility (EMC)	55

Ambient temperature range

Transmitter	–40 to +60 °C (–40 to +140 °F)
Local display	–20 to +60 °C (–4 to +140 °F) The readability of the display may be impaired at temperatures outside the temperature range.
Sensor	■ Process connection, carbon steel: –10 to +60 °C (+14 to +140 °F) ■ Process connection, stainless steel: –40 to +60 °C (–40 to +140 °F)
Liner	Do not exceed or fall below the permitted temperature range of the liner → <i>Medium temperature range</i> , 58.
	 Dependency of ambient temperature on medium temperature → <i>Medium temperature range</i> , 58

Storage temperature

The storage temperature corresponds to the ambient temperature range of the transmitter and sensor.

Relative humidity

The device is suitable for use in outdoor and indoor areas with a relative humidity of 5 to 95%.

Operating height

According to EN 61010-1

- Without overvoltage protection: ≤ 2 000 m
- With overvoltage protection: > 2 000 m (e.g. Endress+Hauser HAW series)

Atmosphere

According to IEC 60529: If a plastic housing is permanently exposed to certain steam and air mixtures, this can damage the housing.

 More Informationen: Endress+Hauser sales organizations.

Degree of protection

Transmitter	■ IP66/67, Type 4X enclosure, suitable for pollution degree 4 ■ Open housing: IP20, Type 1 enclosure, suitable for pollution degree 2	
Sensor	IP66/67, Type 4X enclosure, suitable for pollution degree 4	
Optional sensor		
Order code for "Sensor option", Option CB, CC	IP68, Type 6P enclosure Fully welded, with protective coating as per EN ISO 12944 C5-M and EN 60529	Use of device under water at a maximum water depth of: ■ 3 m (10 ft): permanent use ■ 10 m (30 ft): max. 48 hours
Order code for "Sensor option", Option CD, CE	IP68, Type 6P enclosure Fully welded, with protective coating as per EN ISO 12944 Im2/Im3 and EN 60529	Use of the device in buried applications, under water and in saline water at a maximum water depth of: ■ 3 m (10 ft): permanent use ■ 10 m (30 ft): max. 48 hours ■ Use of device under water at a maximum water depth of: 10 m (30 ft): max. 48 hours ■ Use of device in buried applications

Order code for "Sensor option", option CQ	IP68, type 6P, factory encapsulation Sensor with aluminum half-shell housing	Use of device under rainwater or surface water at a maximum water depth of: 3 m (10 ft)
Order code for "Sensor option", Option C3	IP66/67, type 4X enclosure Fully welded, with protective coating as per EN ISO 12944 C5-M	For operation in corrosive environment

Vibration resistance and shock resistance

Compact version

Vibration, sinusoidal Following IEC 60068-2-6	2 to 8.4 Hz	3.5 mm peak
	8.4 to 2 000 Hz	1 g peak
Vibration, broad-band random Following IEC 60068-2-64	10 to 200 Hz	0.003 g ² /Hz
	200 to 2 000 Hz	0.001 g ² /Hz (1.54 g rms)
Shocks, half-sine Following IEC 60068-2-27	6 ms 30 g	

Shock

Due to rough handling similar to IEC 60068-2-31.

Remote version (sensor)

Vibration, sinusoidal Following IEC 60068-2-6	2 to 8.4 Hz	7.5 mm peak
	8.4 to 2 000 Hz	2 g peak
Vibration, broad-band random Following IEC 60068-2-6	10 to 200 Hz	0.01 g ² /Hz
	200 to 2 000 Hz	0.003 g ² /Hz (2.7 g rms)
Shocks, half-sine Following IEC 60068-2-6	6 ms 50 g	

Shock

Due to rough handling similar to IEC 60068-2-31.

Electromagnetic compatibility (EMC)

As per IEC/EN 61326 and

- HART, Modbus RS485: NAMUR Recommendation NE 21
- IO-Link: IO-Link Interface and System Specification

For more information: Declaration of Conformity

Process

Medium temperature range	58
Conductivity	58
Flow limit	58
Pressure/temperature ratings	60
Pressure tightness	63
Pressure loss	63

Medium temperature range

The medium temperature range depends on the liner.

Hard rubber	0 to +80 °C (+32 to +176 °F)
Polyurethane	-20 to +50 °C (-4 to +122 °F)
PTFE	■ Process connection, carbon steel: -10 to +90 °C (+14 to +194 °F) ■ Process connection, stainless steel: -20 to +90 °C (-4 to +194 °F)

Conductivity

The minimum conductivity is:

- 5 $\mu\text{S}/\text{cm}$ for liquids in general
- 20 $\mu\text{S}/\text{cm}$ for demineralized water

The following basic conditions must be observed for $< 20 \mu\text{S}/\text{cm}$:

- Order code 013 for "Functionality", option D "Extended transmitter" and higher output signal damping is recommended for values under $20 \mu\text{S}/\text{cm}$.
- Observe the maximum permitted cable length L_{max} . This length is determined by the conductivity of the medium.
- With order code 013 "Functionality", option A "Standard transmitter" and empty pipe detection (EPD) switched on, the minimum conductivity is $20 \mu\text{S}/\text{cm}$.
- With order code 013 "Functionality", option A "Standard transmitter" - remote version, empty pipe detection may not be activated if $L_{\text{max}} > 20 \text{ m}$.

i Note that in the case of the remote version, the minimum conductivity depends on the cable length.

10 Permitted length of connecting cable

Colored area = permitted range

L_{max} = length of connecting cable in [m] ([ft])

$[\mu\text{S}/\text{cm}]$ = medium conductivity

Red line = order code 013 "Functionality", option A "Standard transmitter"

Blue line = order code 013 "Functionality", option D "Extended transmitter"

Flow limit

Pipe diameter and flow rate determine the nominal diameter of the sensor.

i The flow velocity is increased by reducing the sensor nominal diameter.

2 to 3 m/s (6.56 to 9.84 ft/s)	Optimum flow velocity
$v < 2$ m/s (6.56 ft/s)	For abrasive media, e.g. potter's clay, lime milk, ore slurry
$v > 2$ m/s (6.56 ft/s)	For media producing buildup, e.g. wastewater sludge

Pressure/temperature ratings

Maximum permitted medium pressure as a function of the medium temperature

The data relate to all pressure-bearing parts of the device.

Fixed flange similar to EN 1092-1

Stainless steel (−20 °C (−4 °F))

- 1 Lap joint flange PN16/Class 150
 2 Lap joint flange, stamped plate PN10, lap joint flange PN10

Pressure tightness

Limit values for the absolute pressure depending on the liner and medium temperature

PTFE	Nominal diameter		Absolute pressure in [mbar] ([psi])	
	[mm]	[in]	+25 °C (+77 °F)	+90 °C (+194 °F)
	25	1	0 (0)	0 (0)
	40	2	0 (0)	0 (0)
	50	2	0 (0)	0 (0)
	65	2 ½	0 (0)	40 (0.58)
	80	3	0 (0)	40 (0.58)
	100	4	0 (0)	135 (2.0)
	125	5	135 (2.0)	240 (3.5)
	150	6	135 (2.0)	240 (3.5)
	200	8	200 (2.9)	290 (4.2)
	250	10	330 (4.8)	400 (5.8)
	300	12	400 (5.8)	500 (7.3)

Hard rubber	+25 °C (+77 °F)	+50 °C (+122 °F)	+80 °C (+176 °F)
	0 (0)	0 (0)	0 (0)

Polyurethane	+25 °C (+77 °F)	+50 °C (+122 °F)
	0 (0)	0 (0)

Pressure loss

- No pressure loss: transmitter installed in a pipe with the same nominal diameter.
- Pressure loss information when adapters are used → *Adapters*, 50

Mechanical construction

Weight	66
Measuring tube specification in SI units	69
Measuring tube specification in US units	70
Materials	72
Fitted electrodes	73
Process connections	73
Surface roughness	73

Weight

All values refer to devices with flanges with a standard pressure rating.
Weight data are guideline values. The weight may be lower than indicated depending on the pressure rating and design.

Transmitter remote version

- Polycarbonate: 1.4 kg (3.1 lbs)
- Aluminum: 2.4 kg (5.3 lbs)

Sensor remote version

Aluminum sensor connection housing: see the information in the following table.

Materials

Transmitter housing	
Order code for "Housing"	■ Option A: Compact, coated aluminum ■ Option N: Remote, polycarbonate ■ Option P: Remote, aluminum, coated
Window material	■ Order code for "Housing", option A: glass ■ Order code for "Housing", option N: polycarbonate ■ Order code for "Housing", option P: glass
Neck adapter	Order code for "Housing", option A, : Aluminum, coated
Sensor connection housing	
	■ Aluminum, AlSi10Mg, coated (in conjunction with order code for "Sensor option", options CF, CQ, C3) ■ Polycarbonate (in conjunction with order code for "Sensor option", options CB, CC, CD, CE)
Cable glands and entries	
Cable gland M20×1.5	Plastic
Adapter for cable entry with G ½" or NPT ½" female thread	Nickel-plated brass
Connecting cable for remote version	
	Electrode cable and coil current cable: ■ PVC cable with copper shield ■ Reinforced cable: PVC cable with copper shield and additional steel wire braided jacket
Sensor housing	
DN 25 to 300 (1 to 12")	■ Aluminum half-shell housing: aluminum, AlSi10Mg, coated ■ Fully welded carbon steel housing with protective varnish
DN 350 to 3 000 (14 to 120")	Fully welded carbon steel housing with protective varnish
Measuring tubes	
DN 25 to 600 (1 to 24")	Stainless steel: 1.4301, 1.4306, 304, 304L
DN 700 to 3 000 (28 to 120")	Stainless steel: 1.4301, 304, S30408, or equivalent
Liner	
DN 25 to 300 (1 to 12")	PTFE
DN 25 to 1 200 (1 to 48")	Polyurethane
DN 50 to 3 000 (2 to 120")	Hard rubber
Electrodes	
	■ Stainless steel: 1.4435 (316L) ■ Alloy C22, 2.4602 (UNS N06022)
Seals	
	As per DIN EN 1514-1, Form IBC

Process connections	
EN 1092-1 (DIN 2501)	 For flanges made of carbon steel: ▪ DN ≤ 300 (12"): with Al/Zn protective coating or protective varnish ▪ DN ≥ 350 (14"): protective varnish  All carbon steel lap joint flanges are supplied with a hot-dip galvanized finish. Fixed flange ▪ Carbon steel: ▪ DN ≤ 300: S235JRG2, S235JR+N, P245GH, A105, E250C ▪ DN 350 to 3 000: P245GH, S235JRG2, A105, E250C ▪ Stainless steel: ▪ DN ≤ 300: 1.4404, 1.4571, F316L ▪ DN 350 to 600: 1.4571, F316L, 1.4404 ▪ DN 700 to 1 000: 1.4404, F316L Lap joint flange ▪ Carbon steel DN ≤ 300: S235JRG2, A105, E250C ▪ Stainless steel DN ≤ 300: 1.4306, 1.4404, 1.4571, F316L Lap joint flange, stamped plate ▪ Carbon steel DN ≤ 300: S235JRG2 similar to S235JR+AR or 1.0038 ▪ Stainless steel DN ≤ 300: 1.4301 similar to 304
ASME B16.5	▪ Carbon steel: A105 ▪ Stainless steel: F316L
JIS B2220	▪ Carbon steel: A105, A350 LF2 ▪ Stainless steel: F316L
AWWA C207	Carbon steel: A105, P265GH, A181 Class 70, E250C, S275JR
AS 2129	Carbon steel: A105, E250C, P235GH, P265GH, S235JRG2
AS 4087	Carbon steel: A105, P265GH, S275JR
Accessories	
Weather protection cover	Stainless steel, 1.4404 (316L)
Pipe mounting kit (welding jig)	Stainless steel 1.4301 (304)
Wall mounting kit	Stainless steel 1.4301 (304)
Ground disks	15 to 1 200 mm (½ to 48 in) ▪ Stainless steel, 1.4435 (316L) ▪ Alloy C22, 2.4602 (UNS N06022)

Fitted electrodes

Standard electrodes:

- Measuring electrodes
- Reference electrodes
- Empty pipe detection electrodes

Process connections

- EN 1092-1 (DIN 2501)
- ASME B16.5
- JIS B2220
- AS 2129 Table E
- AS 4087 PN 16
- AWWA C207 Class D

Surface roughness

All data relate to parts in contact with medium.

Electrodes with 1.4435 (316L); Alloy C22, 2.4602 (UNS N06022); tantalum:
< 0.5 µm (19.7 µin)

Dimensions in SI units

Local display

Operation concept	124
Operation options	125
Operating tools	125

Operation concept

Operation method	Operation via local display with touchscreen ¹⁾ Operation via: ▪ SmartBlue app ²⁾ ▪ Commubox FXA291
Reliable operation	▪ Operation in local language ▪ Uniform operating philosophy in device and in the SmartBlue App ▪ Write protection ▪ When electronics modules are replaced: configurations are transferred using the T-DAT Backup device memory. The device memory contains process data, device data and the event logbook. No reconfiguration is necessary.
Diagnostic behavior	Efficient diagnostic behavior increases measurement availability: ▪ Open remedial actions via local display and SmartBlue app ▪ Diverse simulation options ▪ Logbook of events that have occurred

1) Only for HART and Modbus RS485 communication protocols

2) Optional via order code "Display; operation", options H, J or K

IO-Link

The device-specific parameters are configured via IO-Link. There are specific configuration or operating programs from different manufacturers available to the user for this purpose. The device description file (IODD) is provided for the device.

IO-Link operating concept

Operator-oriented menu structure for user-specific tasks. Efficient diagnostic behavior increases measurement availability:

- Diagnostic messages
- Remedial action
- Simulation options

IODD download

Two options to download the IODD :

- www.endress.com/download
- <https://ioddfinder.io-link.com/>

www.endress.com/download

1. Select "Device Drivers".
2. Select the "IO Device Description (IODD)" entry under "Type".
3. Select "Product root".
4. Click "Search".

↳ A list of search results is displayed.

Select the appropriate version and download.

<https://ioddfinder.io-link.com/>

1. Enter "Endress" as the manufacturer and select.
 2. Select product name.
- ↳ A list of search results is displayed.

Select the appropriate version and download.

For detailed IO-Link information, see "IO-Link" Special Documentation for the device
→ *Related documentation*, 6

Operation options

Local display	 11 Only for HART and Modbus RS485 communication protocols Display elements: ▪ LCD touch screen ¹⁾ ▪ Depends on the orientation, automatic alignment of the local display ▪ Configuration of display format for measured variables and status variables Operating elements: ▪ Touch screen ¹⁾ ▪ Local display can also be accessed in the hazardous area
SmartBlue app	▪ The SmartBlue app allows the user to put devices into operation and operate them. ▪ Based on Bluetooth ▪ No separate driver required ▪ Available for mobile handheld terminals, tablets and smartphones ▪ Suitable for convenient and secure access to devices in hard-to-reach locations or in hazardous areas ▪ Can be used within a 20 m (65.6 ft) radius of the device ▪ Encrypted and secure data transmission ▪ No data loss during commissioning and maintenance ▪ Diagnostic information and process information in real time

1) Only for HART and Modbus RS485 communication protocols

Operating tools

Operating tools	Operating unit	Interface	Additional information
DeviceCare SFE100	▪ Notebook ▪ PC ▪ Tablet with Microsoft Windows system	▪ CDI service interface ▪ Fieldbus protocol	Innovation brochure IN01047S
FieldCare SFE500	▪ Notebook ▪ PC ▪ Tablet with Microsoft Windows system	▪ CDI service interface ▪ Fieldbus protocol	Operating Instructions BA00027S and BA00059S

- PED Cat. II/III
- PESR Cat. II/III

Drinking water approval

- ACS
- KTW/W270
- NSF 61
- WRAS BS 6920

Pharmaceutical compatibility

- FDA
- USP Class VI
- TSE/BSE Certificate of Suitability

HART certification

The device is certified and registered by the FieldComm Group. The measuring system meets all the requirements of the following specifications:

- Certified according to HART 7
- The device can also be operated with certified devices of other manufacturers (interoperability).

Radio approval

The device has radio approvals.

Additional approvals

VDS (for stationary fire extinguishing systems)

Additional certification

- IO-Link
Self-certification with Manufacturer Declaration
- CRN approval
Some device versions have a CRN approval. A CRN-approved process connection with a CSA approval must be ordered for a CRN-approved device.
- EN10204-3.1 material certificate, wetted parts and sensor housing (order code for "Test, certificate", option JA)
- Pressure test, internal process, test report (order code for "Test, certificate", option JB)
- Surface roughness test ISO4287/Ra, (wetted parts), test report (option JE)
- Compliance with requirements derived from cGMP, Declaration (option JG)

External standards and guidelines

Electromagnetic compatibility (EMC) of industrial process and laboratory control equipment.
- NAMUR NE 32
Data retention in the event of a power failure in field and control instruments with microprocessors.
- NAMUR NE 43
Standardization of the signal level for the breakdown information of digital transmitters with analog output signal.
- NAMUR NE 53
Software of field devices and signal-processing devices with digital electronics.
- NAMUR NE 105
Specifications for integrating fieldbus devices in engineering tools for field devices.
- NAMUR NE 107
Self-monitoring and diagnosis of field devices.
- NAMUR NE 131
Requirements for field devices for standard applications.
- ETSI EN 300 328
Guidelines for 2.4 GHz radio components
- EN 301489
Electromagnetic compatibility and radio spectrum matters (ERM).

Application packages

Use	132
Heartbeat Verification + Monitoring	132

Use

Many different application packages are available to enhance the functionality of the device. Such packages might be needed to address safety aspects or specific application requirements.

The application packages can be ordered with the device or subsequently from Endress+Hauser. Detailed information on the relevant order code is available from your local Endress+Hauser sales organization or on the product page of the Endress+Hauser website: www.endress.com.

Heartbeat Verification + Monitoring

Heartbeat Verification

Availability depends on the product structure.

Meets the requirement for traceable verification according to DIN ISO 9001:2015 Clause 7.6 a) "Control of monitoring and measuring equipment":

- Functional testing in the installed state without interrupting the process.
- Traceable verification results on request, including report.
- Simple testing process with local operation or other operating interfaces.
- Clear measuring point assessment (pass/fail) with high total test coverage within the framework of manufacturer specifications.
- Extension of calibration intervals according to operator's risk evaluation.

Heartbeat Monitoring

Availability depends on the product structure.

Heartbeat Monitoring continuously provides data characteristic of the measuring principle to an external condition monitoring system, facilitating preventive maintenance or process analysis. This data enables the operator to:

- Draw conclusions - using this data and other information - about the measuring performance over time.
- Schedule servicing in time.
- Monitor the process quality or product quality .

Accessories

Device-specific accessories	134
Communication-specific accessories	135
Service-specific accessory	136
System components	136

Device-specific accessories

Transmitter

Accessories	Description	Order number
Proline 10 transmitter	 Installation Instructions EA01350D	5XBBXX-*...*
Weather protection cover	Protects the device from weather exposure:  Installation Instructions EA01351D	71502730
Connecting cable	Can be ordered with the device. The following cable lengths are available: order code for "Cable, sensor connection" ■ 5 m (16 ft) ■ 10 m (32 ft) ■ 20 m (65 ft) ■ User-configurable cable length m (ft)  Max. cable length: 200 m (660 ft)	DK5013-*...*
Ground cable	1 ground cable set for potential equalization, consisting of 2 ground cables	

Sensor

Accessories	Description
Ground disks	Ground medium in lined measuring pipes.  Installation Instructions EA00070D

Communication-specific accessories

Accessory	Description
Commubox FXA195 USB/HART modem	Intrinsically safe HART communication with FieldCare and FieldXpert  Technical Information TI00404F
Commubox FXA291	Connects the Endress+Hauser devices with the CDI interface (= Endress+Hauser Common Data Interface) to the USB interface of a personal computer or laptop.  Technical Information TI405C/07
Commubox FXA291	Connects the Endress+Hauser devices with the CDI interface (= Endress+Hauser Common Data Interface) to the USB interface of a personal computer or laptop.  Technical Information TI405C/07
HART loop converter HMX50	Is used to evaluate and convert dynamic HART process variables to analog current signals or limit values.  ■ Technical Information TI00429F ■ Operating Instructions BA00371F
Fieldgate FXA42	Transmission of measured values from connected 4 to 20 mA analog and digital devices.  ■ Technical Information TI01297S ■ Operating Instructions BA01778S ■ Product page: www.endress.com/fxa42
Field Xpert SMT50	The Field Xpert SMT50 table PC for device configuration enables mobile plant asset management. It is suitable for commissioning and maintenance staff to manage field instruments with a digital communication interface and to record progress. This tablet PC is designed as an all-in-one solution with a preinstalled driver library and is an easy-to-use, touch-sensitive tool which can be used to manage field instruments throughout their entire life cycle.  ■ Technical Information TI01555S ■ Operating Instructions BA02053S ■ Product page: www.endress.com/smt50
Field Xpert SMT70	Tablet PC for the configuration of the device. Enables mobile Plant Asset Management to manage the devices with a digital communication interface. Suitable for Zone 2.  ■ Technical Information TI01342S ■ Operating Instructions BA01709S ■ Product page: www.endress.com/smt70
Field Xpert SMT77	Tablet PC for the configuration of the device. Enables mobile Plant Asset Management to manage the devices with a digital communication interface. Suitable for Zone 1.  ■ Technical Information TI01418S ■ Operating Instructions BA01923S ■ Product page: www.endress.com/smt77
FieldPort SFP20	The FieldPort SFP20 is a USB interface for the configuration of Endress+Hauser IO-Link devices, and also of devices from other vendors. Combined with the IO-Link CommDTM (DeviceCare, FieldCare, Field Xpert) and the IODD Interpreter, the FieldPort complies with the FDT/DTM standards.
IO-Link master BL20	IO-Link master from Turck for DIN rails supports PROFINET, EtherNet/IP and Modbus TCP. With web server for easy configuration.

Service-specific accessory

Accessory	Description	Order code
Applicator	Software for selecting and sizing Endress+Hauser devices.	https://portal.endress.com/webapp/applicator
Netilion	IIoT ecosystem: Unlock knowledge With the Netilion IIoT ecosystem, Endress+Hauser allows you to optimize your plant performance, digitize workflows, share knowledge, and enhance collaboration. Based on decades of experience in process automation, Endress+Hauser offers the process industry an IIoT ecosystem that enables you to gain useful insights from data. These insights can be used to optimize processes, leading to increased plant availability, efficiency, and reliability - ultimately resulting in a more profitable plant.	www.netilion.endress.com
FieldCare	FDT-based plant asset management software from Endress+Hauser. Management and configuration of Endress+Hauser devices.  Operating Instructions BA00027S and BA00059S	■ Device driver: www.endress.com → Download Area ■ CD-ROM (contact Endress+Hauser) ■ DVD (contact Endress+Hauser)
DeviceCare	Software for connecting and configuring Endress+Hauser devices.  ■ Technical Information: TI01134S ■ Innovation brochure: IN01047S	■ Device driver: www.endress.com → Download Area ■ CD-ROM (contact Endress+Hauser) ■ DVD (contact Endress+Hauser)

System components

Accessories	Description
Memograph M	Graphic data manager: ■ Record measured values ■ Monitor limit values ■ Analyze measuring points  ■ Technical Information TI00133R ■ Operating Instructions BA00247R
iTEMP	Temperature transmitter: ■ Measure the absolute pressure and gauge pressure of gases, vapors and liquids ■ Read the medium temperature  "Fields of Activity" document FA00006T
